# Revision History

All major edits to this document will be recorded in the table below.

Table 1: Revision History

Description of Changes	Author	Date
Initial draft of document	Matt, Stuart, Rob, Victor	2016-03-15

## List of Figures

## Definitions and Acronyms

Table 2: Definitions and Acronyms

Term	Description
GEANT4	Open-source software toolkit used to simulate the passage of particles through matter
GEANT4-GPU	GEANT4 with some computations running on the GPU
GPU	Graphics processing unit, well-suited to parallel computing tasks
CPU	Computer processing unit, general computer processor well-suited to serial tasks
CUDA	Parallel computing architecture for general purpose programming on GPU, developed by NVIDIA
RHEL	Red Hat Enterprise Linux Server
OS X	Operating system developed by Apple

## 1 Introduction

### 1.1 Purpose of the Document

This section will provide an introduction to the testing report for GEANT4-GPU. A general outline of the document is provided here.

### 1.2 Scope of the Testing

### 1.3 Organization

In Section 4 we provide an introduction to this report. Section 5 describes the test cases which are carried out on each function. Section 6 describes system test cases that

were carried out by our team. In section 7 traceability matrices to requirements and modules are documented. Section 8 provides a summary of changes made in response to the testing results.

## 1.4 Note about Usability

GEANT4-GPU is a back end implementation of already existing GEANT4 modules. Therefore users will not be interacting with it directly. Since there is no direct user interaction with GEANT4-GPU. There are no usability test.

# 2 Module Unit Testing

## 2.1 Use of Automated Testing

Our testing is semi-automated. Due to the nature of this implementation we need to recompile GEANT4-GPU from GPU to CPU in order to get the CPU results to compare against the GPU results. We have a unit test file which performs all our unit tests and writes the results into a file. The user will then have to manually recompile GEANT4-GPU with GPU acceleration off. Once the unit test file is run again another results file is generated. The comparing of the results is automated by feeding them to an application that we created that will compare the test results against each other. The program outputs a summary of any differences between the two results, if there are any.
